

Kristian Ceder

FULL STACK DEVELOPER / CONSULTANT

Profile

Hardworking and results-driven developer with proven ability to solve complex problems and deliver quality solutions to various customer needs. Highly adaptable with exceptional social skills. Currently solving PLM problems with software. Passionate about improving end-user experience.

Employment History

Developer / Consultant, Fulvisol Oy, Helsinki

MARCH 2023 — PRESENT

In this role, I have harnessed my expertise in API integration, testing processes, cloud technologies, agile development, and much more. Things I did and am proud of:

Automated user sync: Proficiently leveraged MS Graph APIs to provide a customer with automated user synchronization between multiple systems, ensuring data security and user privacy.

Integration: Using Rest API, JS, and C# I successfully integrated customer data from another system into ours and the other way around. For example, I made complicated design data integrate into another system seamlessly.

UI/UX: PLM (product lifecycle management) systems have huge amounts of data so I worked a lot with our customers on simplifying the user experience. In PLM world efficiency is everything so UI design focuses on how to provide the most relevant information in any given situation and how to save valuable time with smart solutions.

Automated testing: With a colleague I developed and designed an internal testing tool. Written with C# this tool is simple yet effective and very flexible. The tool will be an integral part of the company's DevOps.

Cloud Proficiency: Successfully deployed and managed cloud resources, optimizing scalability and performance.

Keravan Tilipalvelu Oy

JANUARY 2010 — JANUARY 2021

Throughout my tenure at the family business, I effectively managed various responsibilities, including customer communication, accounting, business planning, and marketing. I am especially proud of how I helped to modernize the work flow.

Operator, Neste Oyj

MARCH 2015 — SEPTEMBER 2020

Overseeing and handling logistic operations. Handling cargo paperwork, analyzing product samples and communicating with the ships crew were some of my regular tasks. Attention to detail and great communication skills were essential in this role.

Education

Software Developer, Hive Helsinki

OCTOBER 2021 — FEBRUARY 2023

A project-based school that is all about coding. I specialized in web technologies after starting my studies with old-school C. Projects I'd like to highlight:

Skills

React
Node.js
JavaScript
Rest API
C#
Python
Typescript
SQL
PHP
C
Git
HTML & CSS
Docker

Languages

Finnish
English
Swedish

• **HyperTube** - A full stack torrent streaming service. My final Hive project. Our three-person team decided to use **React** and **Node.js**. Styling with **Tailwind**.

• **Matcha** - A dating app similar to Tinder. Full stack project built in a team of two. The main technologies used were **React** and **Node.js** Database with **MySQL**. Using APIs, web sockets and new frameworks were some of the most fun parts of creating this project.

University of Helsinki

- Full Stack Open
- Basics of Programming 2020, **Java**, Elements of **AI**, and Ethics of AI
- Introduction to **Cyber Security** and Basics of Computer Hardware
- Currently doing **Python** courses in the evenings
- Accepted to study economics in 2013

Finnish Matriculation Examination, Keravan lukio

JUNE 2013
